

IMMUNOLOGY METHYLATION PANEL

It is well known that many genes are critical for immune response, both innate and adaptive. The proper expression of these genes is not only important for fighting off infection; aberrant expression of these genes can also result in a variety of autoimmune diseases. EpigenDx's immunology panel provides a series of assays designed to target genes important in both the innate and adaptive immune response.

EpigenDx Quality High Resolution

Each Pyrosequencing assay we offer is tested to ensure no PCR bias, and offers quantitative CpG site specific results guaranteeing the highest quality and accurate results.

Compatible with:

- High Resolution Melt Analysis
- Bisulfite subcloning
- Direct Sequencing
- Pyrosequencing
- HRM analysis and Pyrosequencing validation in one PCR

Compatible with:

- CCRI
- CCR2
- CCR5
- CCR6
- CCR7
- CXC3RI
- CXCL10
- CXCL14
- CXCR2
- CXCR3
- FOXP3
- IL 10
- IL15
- IL16
- IL17
- IL17R
- IL17RB
- IL18
- IL1a
- IL1b
- IL2
- IL27RA
- IL28b
- IL2RG
- IL4
- IL6
- IL8
- IL8RA
- INFg
- L13
